

Our vision is that innovation in digital health and care will help Scotland's people to live longer, healthier lives and help Scotland's economy grow.

The Scottish Government's 2020 Vision is that by 2020 everyone is able to live longer healthier lives at home, or in a homely setting.

We identify health and care-led problems where digital innovation can provide the greatest impact.

We bring together right people and capabilities and provide them with the means to identify, design, evaluate and invest in new solutions to the country's health and care priorities.

Our unique needs-led approach is an essential link between the Scottish Government's national priorities and the wealth of talent across different sectors and communities in Scotland.

Our priorities

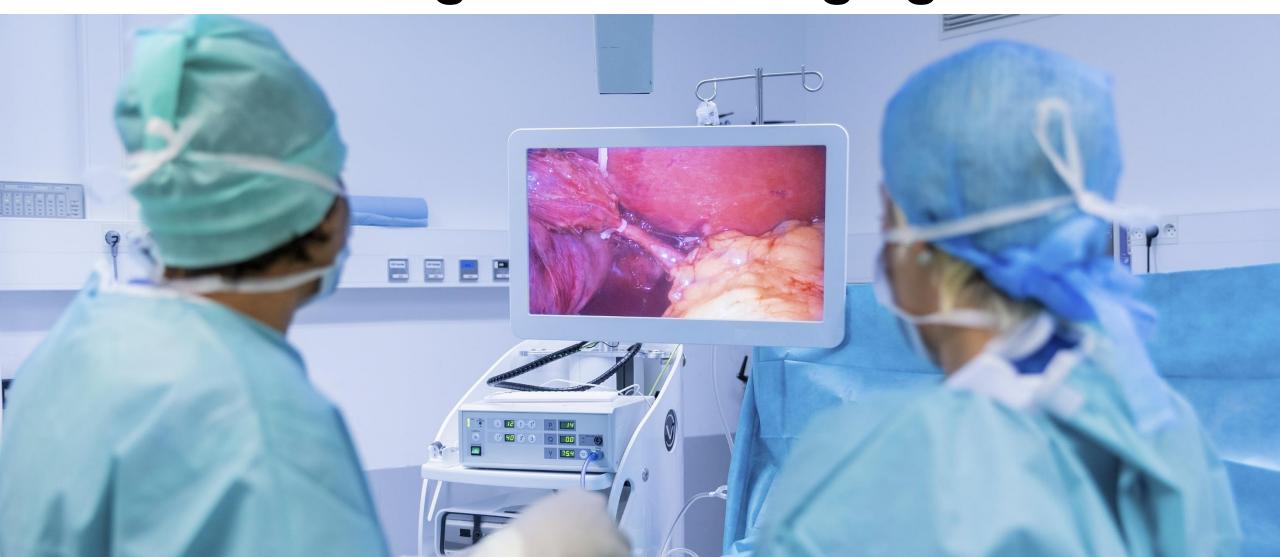

Stroke reduction by digital atrial S DIGITAL HEALTH & CARE FINSTITUTE

Transforming gastroenterology services through remote imaging

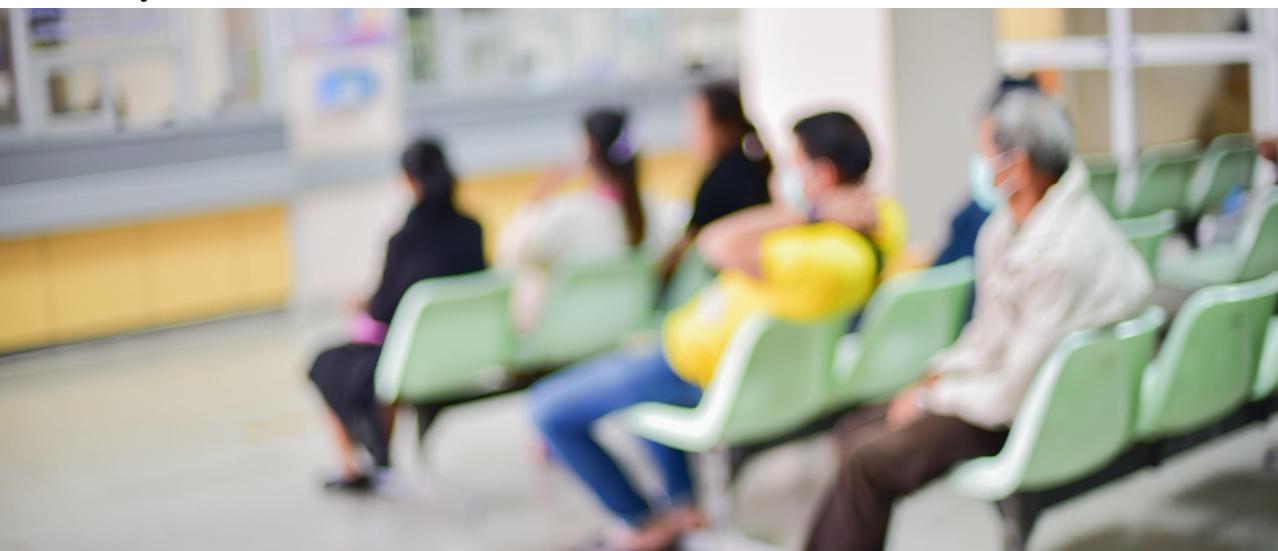

Diabetes management

Development of modern outpatient services

Citizen-centred data shared

Next generation asthma care

A purpose built environment demonstrating:

- Service model innovation
- Technical and digital innovation
- Business model innovation

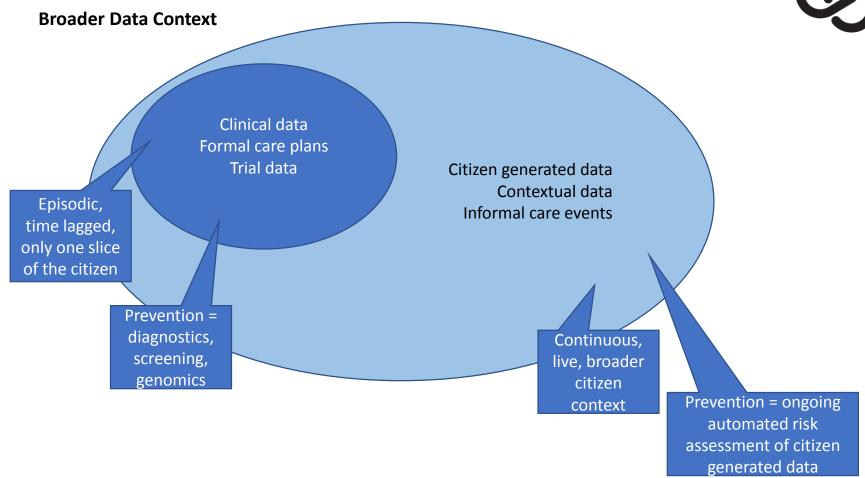

Bringing technology, service and business innovation together

What will it do?

- 1) Build trust in the distributed collection and use of data
- 2) Develop citizen centred communication methods to support co-management
- 3) Use automated risk assessment to develop both 'preventative' and 'management by exception' care models
- 4) Develop decision support infrastructures that support the best possible decisions by all parties.

Basic Proposition
